Notes:

- 2 - Checked and marked queen. This is a new carnit that I installed. Slowly building up.
- 3 - Looks like adding all the bees helped kickstart this queen. I will keep monitoring
- 5 - Queen was on the bottom board, moving but not looking very good, but surrounded by bees. I will need to check next week to see if she is OK. This is a new carni I just installed.
- 6 - Walkaway split. Need to combine as there are no queen cells, eggs or a queen.
- NC - not checked
